Projects

Personal Portfolio Website — **View Project**
- Created a portfoio website using HTML, CSS and Javascript.
- Implemented interactive text animations by splitting words into individual letters with smooth transitions, and created dynamic circular progress indicators using JavaScript.

Moviemate - Movie Information Website — **View Project**
- This site serves as an IMDB clone, leveraging the TMDB API to deliver comprehensive movie information, including curated selections, search functionality, detailed pages, and categories.
- It is built using React, HTML, Tailwind CSS, and JavaScript for a smooth user experience.

Parallax Effects Website — **View Project**
- The Parallax website exemplifies a sophisticated application of the Parallax effect, utilizing Scalable Vector Graphics (SVG) paths and the GSAP ScrollTrigger library to animate image components.
- This design orchestrates a precise and elegant interplay of timing and motion, resulting in a visually stunning and technically complex online experience.
